⚠️ Important Assignment Update Please read this update before starting or continuing the assignment. The assignment document refers to parsing a Markdown (.md) file. For this assignment, you should instead work directly with the provided PDF document. Your task is to build a parsing pipeline that extracts the document while preserving its hierarchical structure, including headings, sections, subsections, lists, tables, and other structural elements, using appropriate PDF parsing and/or OCR techniques. The objective is to reconstruct the document hierarchy as accurately as possible from the PDF, similar to processing real-world engineering and regulatory documents. You are free to use the tools, libraries, and approach that you consider most appropriate. We wish you all the best with your assignment!
